DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4, 6-12, 14-16 are rejected under 35 U.S.C. 102(b) as being anticipated by Horner et al. (US 5,357,544, hereinafter "Horner").

Regarding claims 1, 9, Horner discloses a method of demodulating, comprising the steps of:

sampling the stereo composite signal (the composite signal is sampled at a preselected sampling frequency; col. 2, lines 48-49; col. 3, lines 59-62);

processing the input samples (col. 2, lines 49-51);

generating a reference signal (via reference signal generator 24; col. 4, lines 53-59);

detecting a phase difference between the pilot signal and the reference signal (col. 2, lines 54-55; col. 5, lines 6-8);

varying the variable sampling timings (the phase of the reference signal is adjusted such that the reference signal is approximately 90 degrees out of phase with the received pilot signal; col. 2, lines 55-68; col. 5, lines 16-26); and

digitally processing the internal samples (via digital signal processor 20; col. 5, line 58 – col. 6, line 46).

Regarding claims 2, 10, note decimator 32.

Art Unit: 2643

Regarding claims 3, 6-7, 11, 14-15, digital signal processor 20 uses interpolator/sampler function 36 and its associated coefficient table 38 to interpolate based on the phase error signal output (col. 6, lines 32-35).

Regarding claims 4, 12, coefficient table 38 stores sets of coefficients (col. 6, lines 35-46).

Regarding claims 8, 16, pilot canceling function 40 extracts the pilot signal from the composite signal (col. 8, lines 12-13).

Allowable Subject Matter

3. Claims 5 and 13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Green and Collier et al. show other digital FM stereo decoders.
